

■ DATA COLLECTION & DATA SOURCE IDENTIFICATION

AI & ML Internship – Task 1 Report

1. Introduction

This task focuses on understanding the structure of a dataset, identifying data types, checking missing values, and preprocessing data for AI/ML applications using Python and Pandas.

2. Objective

To understand dataset structure To identify numerical and categorical variables To inspect missing values To preprocess data for AI/ML applications

3. Dataset Information

Dataset Name	Titanic Dataset
Rows	891
Columns	12
File Format	CSV
Libraries Used	Pandas, NumPy

4. Tasks Performed

Loaded dataset using Pandas Checked dataset shape and dimensions Used `.info()` and `.describe()` Identified numerical and categorical columns Checked missing values Explored unique values in categorical columns

5. Conclusion

This task helped in understanding the basics of dataset preprocessing and exploratory analysis for AI/ML applications using Python and Pandas.
